

Hypnofrog

PREVIEW

One frog, twelve shared flies, one shared multiplier: bet on a fly, switch while it lives, cash out before the tongue — or the frenzy that ends the round.

GAME FACTS

Game type	crash · multiplayer
Theoretical RTP (default)	97% · configurable per room
Theoretical house edge	3%
Max multiplier	927.711x (reachable; configured cap 1000x)
Volatility	high

Languages	EN · ES
Platforms	desktop · mobile · webview · mobile-first · iframe
Generator version	hf-0.1.0
Status	Playable preview; not yet certified

HOW IT PLAYS

- One frog, twelve shared flies, one public multiplier that only climbs. Bet on a fly before the launch or while the round runs; everyone sees where the crowd sits.
- Beat by beat the frog eats flies. A bet dies with its fly, unless it switches to a live one first: up to 3 free switches, one expiring every 8 beats.
- The frenzy ends the round for everyone still in. Cash out any time at the locked ladder value. Up to 3 positions open at once.

INTEGRATION

- **RGS / iframe:** signed launch; bet, win, rollback and balance callbacks, HMAC-SHA256 both ways.
- **Per room:** RTP, bet limits, max win, exposure cap and feature flags. EN/ES and lobby URL per launch.
- **Before real-money launch:** partner integration, recovery validation and market approvals.

FAIRNESS

- **Provably fair:** SHA-256 chain commitment, post-round seed reveal and command ledger.
- **Theoretical RTP:** rounding and payout limits apply; paid return can differ by stake.
- **Not yet certified.** Laboratory scope to be agreed for the target markets.

TRY IT

Demo (virtual balance): <https://casino-prod-production.u.p.railway.app/hf/?room=hf-demo>

Rules and figures: <https://nervestudios.co/docs/games/hypnofrog/>

Fairness: <https://nervestudios.co/docs/fairness/>

Volatility figures: 60,000 simulated rounds of generator hf-0.1.0 at the default RTP, per fly, not per shared round; the median round length over 300,000, because it sits on the boundary between two beats. Simulation results are not certification and not a guarantee of individual returns. Parameters from the source catalog. Demo participants may be simulated.
